

ACTIVE INVERTED MAGNETRON (AIM) GAUGE

edwardsvacuum.com

Edwards Active Inverted Magnetron (AIM) Gauges provide accurate measurement over the vacuum range of 1×10^{-2} to 1×10^{-9} mbar. These gauges have proved to be rugged and reliable in a wide range of applications, ranging from scientific instruments to industrial processes.

The AIM-X Gauge is an inverted magnetron gauge head and gauge controller combined into a single compact unit, and features a linear output for easy integration with a computer or PLC.

The XL variants have a very low external magnetic field, these are ideally suitable for use with sensitive analytical instruments or in applications where the gauge needs to be mounted in close proximity to a turbomolecular pump.

Features and benefits

- Drive electronics combined in the gauge head
 - Reduce the system cost
 - Save valuable rack space
- Wide-range, regulated, internal power supply
 - Runs from standard d.c. power supplies +13.5 to +36 V
 - Tolerant to voltage fluctuations
- Standard analog output 0 to +10 V d.c. and gauge identifier
 - Easy to interface with a computer or PLC
 - Fault output indication
- Low output impedance and integral Faraday shield
 - Provide high level of noise immunity
 - Permit long cable runs (up to 100 m)
- Interchangeable body tube
 - Rapid tube replacement without pre-calibration
 - Electrode service kit allows user cleaning and maintenance
- Bakeable Tube
 - The DN40CF tube is bakeable to 300 °C (with the electronics removed)
- Unique striker design
 - Ensures rapid striking even at high vacuum or in contaminating conditions
- CSA, C/US Approved
 - Meets safety requirements for electrical equipment for measurement
